EDUCATION

Indian Institute of Information Technology (IIIT), Guwahati
Bachelor of Technology in Electronics and Communication Engineering

Guwahati, India
2022 – 2026

EXPERIENCE

Fobet Media

Apr 2026 – Present

Design Engineer

On-site

- Own ContentOS end to end: an internal AI pipeline turning raw creator footage into ready-to-shoot Hinglish Instagram scripts. Architected the multi-phase pipeline myself (intake, scraping, ranking, script generation) with LLM calls at each stage, running in production at ~\$1.50 per analysis.
- Designed and built the interface myself on a Next.js / Supabase / Gemini stack, closing the loop between the product calls and the code that ships them.

Find My Genie

Jan 2026 – Mar 2026

Founding Design Engineer

Remote

- Designed and coded the entire frontend solo on an AI-powered concierge platform: four production React/Next.js portals, customer app, vendor portal, admin HITL, and admin verification, with no design-to-dev handoff.
- Built the human-in-the-loop admin layer myself, intervention controls, trust indicators, override patterns, for an AI agent contacting 20+ vendors simultaneously; redesigned live-status tracking to cut the booking flow to 4 steps, ~35% faster.

Jobmato

Oct 2024 – Aug 2025

Product Designer

Hybrid

- Designed the Android application UI from scratch across 20+ screens, establishing a component library that cut design-to-dev handoff time by ~40%.
- Defined full visual identity, logo, typography, color system, and brand guidelines, adopted consistently across product, marketing, and social channels.

Stealth Startup

Apr 2024 – Aug 2024

Product Designer

Remote

- Took a student-facing offline events platform from zero to final UI in 10 weeks, designing all user flows, onboarding, and event discovery end-to-end.
- Built a reusable design system of 30+ components, enabling the founding team to iterate on new features without design bottlenecks.

KEY PROJECTS

Claussal.ai (Legal AI Agent)

Dec 2025 – Mar 2026

- Led product design for a litigation and compliance AI platform for the Indian legal market, integrating LLM outputs into 8 dashboard views covering case tracking, document analysis, and compliance workflows.
- Solved high-density data display challenges by creating a structured layout system that surfaces critical case signals without overwhelming legal professionals.

Naksha Studio (Open-Source)

github.com/Adityaraj0421

- Built and shipped solo: a 26-role virtual design team for Claude Code, Cursor, Windsurf, Gemini CLI, and Copilot, with 62 commands and 15,000+ lines of expert design knowledge.
- 297 GitHub stars, 22 forks; real, unpaid adoption across the AI developer tools ecosystem.

CERTIFICATIONS

10k Designers, Product Design Cohort · Google UX Design Professional Certificate, Coursera

TECHNICAL SKILLS

- **Design:** Product Design, UI/UX, Interaction Design, Design Systems, Usability Testing
- **Tools:** Figma, Adobe Creative Suite, Protopie
- **Development:** React, Next.js, TypeScript, JavaScript, HTML, CSS, Python (FastAPI)
- **AI:** LLM/API integration (ContentOS, Petrosa, Claussal.ai), LangGraph
- **Strengths:** Design Leadership, Strategic Thinking, Cross-functional Collaboration
